

Model Selection Guide

CM-331 1 Relay

Includes option for Light Ring and Wireless Transmitter

New Application

Ideal for activation and control, where door status indication is required. This eliminates the need for a separate door control relay.

Retrofit Application

Ideal for replacement of non-powered switches, without battery maintenance. Re-use 2 existing wires for power and optional CM-TX99 plug-in wireless transmitter to activate door opening.

CM-324 *1 Relay, Line Powered*

Ideal for economical door activation where a door or locked status indicator is not required.

These switches feature an operating range of 1"-30" and an adjustable time delay of 1-5 seconds, providing superior performance in ambient lighting conditions.

CM-325 *1 Relay, Short Range*

Ideal for short range sensing in confined areas such as in restrooms.

These switches are designed for use in healthcare and facilities where highly reflective surfaces (chrome or polished stainless steel) cause standard switches to false activate.
